NEWS BULLETIN OF DEPARTMENT OF COMPUTER SCIENCE

MESSAGE FROM THE HEAD OF THE DEPARTMENT

Demand for Upskilling to Navigate the Domain of Frontier Technologies

GenZs are very active in the virtual world in many ways. However, are they all utilizing online resources effectively for their personal and professional development?

It is time to channel the hyperactive nature of this young generation in the virtual world toward productive and sustainable outcomes.

As educators of GenZs, we can achieve this by collaborating with technological advancements and the academic environment in their virtual world. Here comes the relevance of seed ideas and skills. Instead of sticking to traditional methods of completing the syllabus through lecture-based teaching, we need to adopt a strategy that brings out the best in these vibrant and amazing GenZs by encouraging them to explore the fascinating world of online resources and Artificial Intelligence.

This begins with introducing a few seed ideas related to their courses and providing guidance to develop skills based on those ideas by leveraging Artificial Intelligence tools and other relevant technologies. When we design courses and programmes around seed ideas and skills, it ensures resilience among GenZs in terms of competence and sustainability.

Once upskilling is driven by curiosity, the results are enhanced, leading to personal and professional maturity, measurable through observable performance metrics. For any academic institution to become entrepreneurial, the curiosity and smart effort of its primary stakeholders, such as students, are essential. It is time to awaken GenZs and guide them to explore frontier technologies to greater heights.
