- Impact of Covid-19 pandemic.

VIII. Read the following passage below and make notes using a format –
diagrammatic or linear :

4

With the increasing human population, the needs of the people also increase. But the point of concern is that there are not enough natural resources to serve all your needs. What if these resources finish, this is one thing that we need to ponder upon. We need to start recycling waste to conserve our natural resources. Recycling is simply the process of reusing the items from which utility can still be derived. It is important to recycle waste so that we can at least conserve some of our natural resources for the generations to come.

Many products such as paper, cardboards and cups come from trees. In fact trees are our natural assets; you can conserve trees by recycling the paper products as by doing so we can minimize the number of trees cut down a year. Recycling waste will not only save our natural resources but will also help save energy. By simply recycling an item, we can save all the energy that would have been consumed in the process of making it. The same example can be taken with plastic items. A large amount of energy can be saved by simply reusing the plastic items. To recycle waste is to simply reduce pollution. By recycling plastic material, we can reduce air pollution as well as water pollution. Plastic factories produce a large amount of smoke while producing plastic material at the same time, if we don't have a proper waste disposal system then those waste emissions will cause water pollution. Recycling helps reduce pollution too.

IX. Bangalore University has directed all the affiliated colleges to conduct Two-Day 'Personality Development' Programme, as a Student Union Secretary of the event, prepare a report on the scheduled programme.
